Chapter 16: Geographical
Information Systems (GIS) In

the last chapter, we learned about applications that allow us to manipulate raster images. In this chapter, we'll take the next step by looking at a new type of imaging data called Geographic Information Systems or GIS. Geographical data has been collected about our environment for generations.

These data are used by engineers and cartographers to create maps and illustrate spatial trends, such as population density and road

coverage. We've all seen national maps that show us all the states, counties, and cities in the U.S., or a map of North America that highlights places such as mountains, rivers, and lakes. Today, GIS data is used to determine how many units are in a neighborhood or how much food is grown in a particular area. GIS data can tell us whether it's safe to swim in a particular lake or what type of houses are near a school campus. It's used to analyze

or visualize everything from the microcosm—our bodies—to the macrocosm—our world. Every time you use the internet, you use a GIS system: When you search something like "sushi, philly, or fan forums," GIS data is used to determine how many hits each search term returned. This data is used by advertising and marketing companies to determine where to place their new ads. It's used by

governments to determine where to build new facilities and what types of services and products they should offer. In this chapter, we'll look at GIS at its most basic and at its most detailed. We'll learn about the basic types of GIS data, the key differences between 2D and 3D data, and how it can be used for many types of purposes. # GIS Terminology Your GIS data will look like a collection of geometric objects. They may be points,

lines, or polygons. Most data is represented as polygons, or closed areas. Points are used to create lines or borders, and lines are used to create shapes, such as polygons. The data itself isn't geographic or "geographic," although it's often visualized in a geographic context. Computer technology enables us to

Eligibility for and utilization of antenatal care in Italy. The aim of this study was to investigate, by means of data collected by the National Institute for Statistics and to develop a model for use in the calculation of the percentage of pregnant women who would have received antenatal care in Italy. Data were collected from the survey on consumption

expenditures, carried out by the National Institute of Statistics (ISTAT), within the framework of the consolidated budget (Ricerca di Custodia). A total of 3,611,462 women giving birth were examined. The survey on consumption expenditures included a question on antenatal care. The answers to this question were used to estimate the total numbers of women receiving antenatal care in Italy, and the percentage of

women who had received at least one visit to the antenatal care unit. The survey showed that, in 2007, on average, 39.6% of pregnant women in Italy had at least one visit to the antenatal care unit. The results of this study are essential for policy makers to be able to plan the implementation of services aimed at increasing antenatal care coverage.Q: Data is showing up as NULL in the html but it is not null I

am having a problem that is driving me a little crazy and I don't know what is causing it. I have a text box in a function that is passed the result from an ajax call. Everything works perfectly, except that the contents of the text box is not shown in the HTML source, but is printed out as NULL. Here is the code: `function fetch_portfolio_info(PortfolioID){ var text = 'null'; $.ajax({ type: "GET", url: "/fx/PortfolioData.aspx?PortfolioID=" +`

```
PortfolioID, success:  
function(data){ text =  
data.d; for (var i in data) {  
console.log(data[i]);  
console.log(i);

What's New In Adobe Photoshop 2021 (Version 22.1.1)?

What's the Story? What's the Story? A fascinating book that exposes how a fanatical reporter was given a plum job at the Times in the 1990's and worked relentlessly to snoop around the paper until he could

blackmail them into giving him extra work at a website his mother had dreamed up. The publishers of *What's the Story?* must have been impressed by the film's opening credits: a 1980's Power Rangers logo with Scorpious, the Devil, Old Man Herman and his Follow Me Girl. The *Spy vs Spy* fiction of *What's the Story?* is dense enough to write an entire book about. The first quarter of the book describes the birth of a dysfunctional,

conspiratorial relationship between this reporter and the editor of the paper that employs him. A few years into the job, he witnesses a clash between the editor and the top brass at the Times, and by the end of the book he is ready to have it out with them. If that sounds a little too meta and predictable, the rest of the book is better than you could have hoped for: it deals with the intrigue and corruption of the New York Times (plenty

of it) and is a brilliant and very funny expose of how the media is making and unmaking public figures and the particular worth of the Journal.
