Thanks for helping! I am having trouble extracting the files to my card, I can run the app and play games and it will download everything fine, but I can't extract the files to my card. It says my system doesn't have enough memory. What am I doing wrong? Hi, I downloaded Kore 2 Player from this page on NI website.. with Service Center it required a serial number, how should I get it? Thanks again! Click to expand... You need to transfer the .pak files from the ROMS to your card. Kore 2's .pak files are small, but the .ibd and .vol files can get big. I have the Kore 2 player, but I need to get the kore 2 server running... I tried downloading the .pak files, but it says the file is not an archive. I also downloaded the .ibd and .vol files, but when I extract them, they are just corrupted files with the extension in the middle of the name (not the .ibd and .vol of Kore 2, but just something different). I tried following the directions for the K2 Player to get the kore 2 server running (getting a serial number, connecting to server), but the program just won't run. Any ideas? Thanks! 82157476af
